Experience

Web Developer

ZDesign April 2014 - Present

- Create unique, responsive websites using the latest technologies and frameworks
 Create/edit content for clients ensuring key points are communicated effectively
- Update/maintain as needed, along with providing instruction to clients on how to make changes independently
- Meet client budgets by using a variety of technologies and platforms

Wordpress Developer

Archive Digital

May 2021 – November 2021

- Build custom Wordpress websites for clients to suit their specific needs/goals while keeping projects ontime and within budget
- Create e-commerce solutions to increase efficiency, productivity, and meet/exceed financial goals
- Maintain, update, and debug projects as-needed to keep websites running fast and securely

Front End Developer

Save On Life

February 2019 - March 2020

- Create responsive pages/forms within custom Wordpress platform using Javscript and jQuery
- Interact with API to guide user journeys in shopping for insurance providers
- Write clean code and debug issues working with a remote team across Canada and the UK

Front End Developer

April 2017 – May 2018

Trends Mobile & Web Solutions

- Design and develop new websites using the framework providing the best solution for our individual clients
- Provide monthly maintenance, updates, and recommended upgrades for all sites
- Create e-commerce and database solutions to streamline sales conversions and other user-access issues

Front End Developer/Content Publisher

November 2016 – January 2018

finder.com

- Design and develop responsive webpages and templates using the Wordpress platform
- Help design content campaign page architecture within finder.com's custom ecosystem
- Rapidly publish content, blog posts, and marketing material

Education

University of Colorado at Boulder

August 2005 - May 2008

B.A. in Communications – Emphasis on technology, marketing, and interpersonal communication

Web Development, Algorithm, and Data Structure Foundations - Firehose Project

June 2016 - August 2016

In an immersive 24-week program I learned how to become a self-sufficient programmer able to break down complex problems into manageable pieces. I learned how to use cutting-edge technologies & frameworks, while keeping in mind best practices so that my code is easily maintainable

- Learned how to build-out basic CRUD Rails-apps following standard Rails conventions (without scaffolding), involving mailers, validations, image/video uploading on AWS S3, and nested RESTful routes
- Implemented Rspec for both unit and functional tests
- Worked through traditional computer science algorithms and data structures challenges
